

## Galvanized Steel Wireway

To ensure maximum quality, Draka manufactures its own wireway and fittings. Superior materials combine with time-tested construction to produce the industry standard for wireway.

### ***Start with the best raw materials***

Draka wireway begins with hot-dipped mill-galvanized sheet steel that conforms to UL 870 and CSA C22.2 No. 26 standards. Screws are galvanized as well.

### ***Careful construction***

The steel is then skillfully formed into trough and fittings within tolerances of 1/16" for internal dimension and 1/32" for joints, corners and screw/hole placement. Welds are made by hand.

### ***Unmatched warranty***

Draka wireway is UL listed and meets all appropriate CSA standards. It is also backed by an industry-best lifetime limited warranty.

### ***Full selection***

Draka wireway is available in standard sizes 2 1/2" square, 2 1/2" x 4", 4" square, 4 x 6", 6" square and 8" square, with customized sizes easily accommodated. Elbows, tees and crossovers are available, as well as nuts, bolts, mounting kits and strain bars.

### ***A full selection of wireway***

Along with offering our Draka-made wireway, Draka offers a complete selection of flexible conduit (both regular and watertight), EMT and rigid pipe with all necessary fittings.

We also offer a full complement of cutting and splicing tools, connectors and hardware for wire installation and management.

### ***Construction details:***

- Hot-dipped mill-galvanized steel
- Galvanized screws with screw protection
- Tight-tolerance construction
